JONAS ELCID N. DAVID

Full-Stack Developer / AI Developer / Automation Engineer

Philippines | 0908-678-2848 | jonaselcid30@gmail.com | linkedin.com/in/jonas-david-487722352 | github.com/Elciiid | portfolio-application-swart.vercel.app

SUMMARY

AI Software Engineer and Full Stack Engineer building SaaS applications, RAG systems, and enterprise internal tools. Recent Magna Cum Laude Computer Science graduate who now runs a live multi-tenant portal for Philippine local government clients, with hands-on experience across Next.js, React, TypeScript, FastAPI, Python, Supabase, PostgreSQL, pgvector, REST APIs, and Gemini-backed AI features. Focused on secure multi-tenant architecture, authentication, document intelligence, workflow automation, and product-oriented engineering.

TECHNICAL SKILLS

Languages: TypeScript, JavaScript, Python, PHP, SQL, Java
Frontend: Next.js, React, Tailwind CSS, HTML/CSS, Three.js, GSAP
Backend: FastAPI, REST APIs, Node.js, PHP, Supabase Authentication, backend authorization, JWT, TOTP two-step sign-in
Databases: PostgreSQL, Supabase Postgres, Row-Level Security (RLS), pgvector, SQL Server, Firebase
AI Engineering: RAG, Embeddings, Semantic Search, Vector Databases, Prompt Engineering, Gemini API, LLM Integration, AI Automation, AI-assisted development (Claude Code)
Cloud & Dev Tools: Git, GitHub, Docker, AWS, Vercel, Vitest, Codex, Claude Code, XAMPP

EXPERIENCE

Software Engineer, Artea Green Ventures (AGV) **Jul 2026 - Present**

- Own and operate the AGV Portal, a live multi-tenant platform used by AGV staff and Philippine local government (LGU) clients, built with Next.js, React, TypeScript, Tailwind CSS, Supabase (Postgres, Auth, RLS, Storage), and Vercel.
- Designed tenant isolation with Postgres row-level security, guard triggers, and SECURITY DEFINER functions; added provinces as independent tenants, proven safe by a snapshot-and-compare migration and a 149-check adversarial SQL harness.
- Built mandatory two-step (TOTP) sign-in with admin-reset recovery, a phased rollout, and a database kill switch; made the audit log append-only for every role, including the service role.
- Built a role-based LGU file library (staff upload, admin-only removal, soft delete) and a Hydro Intelligence System (HIS) launcher; designed a signed-token (JWT, ES256) gate so LGU HIS deployments open only through the portal.
- Direct AI-assisted delivery with Claude Code under production safeguards: written specs, additive and reversible migrations with tested rollbacks, rolled-back SQL harnesses, and phased releases to live users, taking requests directly from the CSO.

Full-Stack Developer Intern, La Rose Noire Philippines, Inc. **Dec 2025 - Mar 2026**

- Built internal tools, role-based portals, and operational dashboards with PHP, SQL Server, JavaScript, and Tailwind CSS for enterprise workflows.
- Implemented backend logic, SQL-driven data flows, approval/workflow automation, and secure data handling for internal systems.
- Developed admin interfaces for tracking operational activity and supporting production-floor workflows, and supported troubleshooting, networking, servers, and device deployment as needed.

PROJECTS

Jarvis - Multi-Tenant AI SaaS / Company Knowledge Platform
Next.js, React, TypeScript, FastAPI, Python, Supabase, PostgreSQL, pgvector, Gemini API, REST APIs

- Built a full-stack RAG platform for company-scoped knowledge with Supabase Authentication, workspace creation, active memberships, protected app routes, and FastAPI bearer-token validation.
- Implemented PDF/DOCX/TXT ingestion with private Supabase storage, extraction, recursive chunking, and safe processing errors, plus a Gemini embedding and pgvector retrieval pipeline with a backend-only semantic search RPC and company-scoped RLS.
- Shipped Context Builder and grounded Knowledge Assistant that retrieve authorized source chunks, construct bounded prompt context, return source documents/chunk previews, and answer only from available company information.

AI Web3 Automation Platform
Next.js, TypeScript, Supabase, Gemini API, Alchemy, Telegram, Vercel

- Built an event-driven automation workspace for wallet monitoring, blockchain activity ingestion, AI rule parsing, transaction summaries, and in-app/Telegram alerts.
- Designed Supabase Auth, Postgres, and RLS workflows that keep Alchemy, Gemini, Telegram, and service-role secrets off the client.

CentralPoint
PHP, SQL Server, Tailwind CSS, JavaScript

- Built an enterprise intranet portal and admin layer for internal app access, live feeds, messaging, meeting scheduling, venue conflict checks, notifications, and role-aware dashboards backed by SQL Server.

Facebook Phishing Detection
Python, JavaScript, Firebase, Docker, Autoencoders, Graph Convolutional Networks

- Developed a browser extension and HTTPS REST backend that analyze phishing risk and blur suspicious posts, using a hybrid pipeline of URL lexical features, Autoencoder anomaly detection, and GCN domain relationship signals.

EDUCATION

Holy Angel University - Bachelor of Science in Computer Science, Magna Cum Laude **2022 - 2026**
Certifications: AWS Cloud Foundations; Cisco Cybersecurity Essentials; Cisco Cyber Threat Management; CCNA: Introduction to Networks
